Application/Control Number: 09/202,070 Page 2

Art Unit: 2834

This is in response to the brief on appeal filed.

## (1) Real Party in Interest

A statement identifying the real party in interest is contained in the brief.

### (2) Related Appeals and Interferences

A statement identifying the related appeals and interferences which will directly affect or be directly affected by or have a bearing on the decision in the pending appeal is contained in the brief.

## (3) Status of Claims

The statement of the status of the claims contained in the brief is correct.

Claims 47-62 withdrawn from consideration as not directed to the elected.

#### (5) Summary of Invention

The summary of invention contained in the brief is correct.

#### (6) Issues

The appellant's statement of the issues in the brief is correct.

## (7) Grouping of Claims

Appellant's brief includes a statement that claims do not stand or fall together and provides reasons as set forth in 37 CAR 1.192(c)(7) and (c)(8).

## (8) Claims Appealed

The copy of the appealed claims contained in the Appendix to the brief is correct.

# (9) Prior Art of Record

Application/Control Number: 09/202,070

Page 3

Art Unit: 2834

The following is a listing of the prior art of record relied upon in the rejection of claims under appeal.

5194836 Vale et al 3-93

5185589 Krishnaswamy et al 2-93

5-259804 Japan 10-93

## (10) Grounds of Rejection

The following ground(s) of rejection are applicable to the appealed claims:

Claims 42-46 and 2-14 are rejected under 35 U.S.C. 102 as anticipated by

Krishnasawamy (figs. 1-5 and 7), Curran (fig. 8), Vale (figs. 1 and 2) or Japan (804) (fig. 4).

Each reference explicitly teaches the <u>structure</u> claimed. For example, fig. 7 of Krishnasawamy teaches a wafer #57, #53, a ground electrode #56, #52, a piezoelectric thin film #51, #55 and an upper electrode #50, #54. Vale (figs 1 and 2) shows wafer #30, #70, piezo wafer #85, a bottom electrode #80 and a top electrode #90. Curran (fig. 8) teaches wafer #24, common electrode #30, #32, piezoelectric thin elements #26 and top electrodes #28. Japan (804) (figs. 4 and 5) shows bottom electrode #4, piezo resonator #2 (thin portion), wafer #3 (thick portion) and top electrode #6, #7, #8, #9.

Claims 2-14 and 42-46 are rejected under 35 U.S.C. 102 as anticipated by Krishnasawamy (Figs. 1-5 and 7), Corran (Fig. 8), Vale (Figs. 1 and 2) or Japan (804) (Fig. 4). Each reference teaches the claimed structures. Note that the "wherein at least one component --- on the wafer" is merely a statement of desired function adding no structure to the device claimed.

Application/Control Number: 09/202,070

Art Unit: 2834

It has been held that the functional "whereby" statement does not define any structure and accordingly can not serve to distinguish. In re Mason, 114 USPO 127, 44 CCPA 937 (1957).

Page 4

The functional "wherein" recitations have not been given patentable weight because they are narrative in form. In order to be given patentable weight, a functional recitation must be expressed as a "means" for performing the specified function, as set forth in 35 USC 112 and must be supported by recitation in the claim of sufficient structure to warrant the presence of the functional language. In re Fuller, 1929 C.D. 172; 388 O.G. 279. It has been held that the term "integral" is sufficiently broad to embrace constructions united by such means as fastening and welding. In re Hotte, 177 USPQ 326, 328 (CCPA 1973). It is also noted that the method of forming a device is not germane to the patentability of the device itself.

Each reference obviously designs the resonator chips with a final frequency in mind and then fine tunes the device (usually thru additional ore removed of material) to compensate for the deviations in manufacture. Once the final tuning is achieved one cannot tell where metal was deleted or added or how much. Thus statement, referring to the desire to adjust to e.g. the final frequency based on wafer position are meaningless in a finished article claim.

For any transducer designed, the electrode pattern and placement on the substrate are "determined" at some point. Even assuming arguendo that this "where in" phraseology does determine some structure it would be impossible to determine the identical final products even if their electrode positions were "determined" by a different rational. Regardless, note Japan (804) (Fig. 4), the resonators 5 and 5' have different shapes at different substrate locations. In Curran,

Application/Control Number: 09/202,070

Art Unit: 2834

resonators A, B and C each have a different frequency thus they must be structurally different at

different locations. Note they are also located a distance from each other to avoid interference:

thus positions determined---". The same argument holds true for Krishnasawamy and Vale (note

the leads are different for #15, #20 and #25 as "determined by their location on the substrate---".

(11) Response to Argument

The grounds for final rejection are seen to answer and rebut applicants arguments.

Applicant and the examiner simply disagree on whether or not the "wherein" statements or

"method of manufacturing" recitation are to be considered "structural" device or article claimed.

For the above reasons, it is believed that the rejections should be sustained.

Respectfully submitted,
